OCHEM MICHAEL MUNACHI

Game & Web Developer

Game Development | *Frontend Development* | *Generative AI Engineering*

munachiochem143@gmail.com | Portfolio | X (Twitter) | Nigeria

Dear Hiring Manager,

I got into building because I play. Competitive mobile gaming taught me what makes an experience feel fair, fast and worth coming back to, and I wanted to make those experiences myself. That curiosity turned into games, websites and tools that real people use.

I founded Muniac Studios, a game development studio, and shipped its first title, *Ojuju Calabar*: a first-person 3D Nigerian horror escape game that runs in the browser and on Android, on a lightweight WebGL engine with puzzles that change every game and a live speedrun leaderboard. As a frontend intern at Harvest House, I built and deployed five responsive websites across very different industries, from a SaaS landing page with pricing to an e-commerce store with a full cart and checkout. As captain of Monarchs of Gaming eSports, I built StrikeRank, a ranking system that tracks every player's strengths, weaknesses and performance across our sessions.

Alongside my Computer Science and Education degree at Lagos State University, I do my best work where products are shipped, tested by real users and improved quickly. I pair solid frontend fundamentals with generative AI tools like Claude Code and Codex to move from idea to working build fast, without losing attention to detail. I would welcome the chance to bring that energy to your team, learn from experienced engineers and help build things people genuinely enjoy using.

Here's what I can bring to the role:

1. Hands-on game development, from 3D scenes and puzzle design to shipping on web and mobile.
2. Responsive, production-ready frontend work across marketing, SaaS and e-commerce sites.
3. Practical generative AI engineering that speeds up development without cutting corners.
4. Leadership and community skills from captaining an esports team and managing a university gaming community.

I look forward to discussing how my skills and experience can contribute to your team's success. Thank you for considering my application.

Sincerely,
Ochem Michael Munachi
